ABOUT ME

Web Full Stack developer with more of 2 years of experience.

I consider myself an excellent work partner for my sense of humor and energy for work. I'm always trying to get new challenges to grow as a programmer.

WORK EXPERIENCE

Mentor in Web Developer Full Stack Career - ICARO Asociación Civil

In Remote to Cordoba, February 2022 - September 2022

As a mentor my work had different tasks

Rebuilding the system of homework for the students was my more important task.

It used to have a system where they have separated homeworks and it was hard to see the progression of the students with that system.

So we decided with a partner to propose a system of sprints from SCRUM project management.

This idea was also for the creation of a personal webpage per student, where they could practice all the viewed information and at the end of the course they could finish it with a webpage for their portfolio.

- A schedule for the students to bring their doubts and solve them in the class. In this type of classes the Mentor gets a role of professor to solve the doubts.
- Participate in practical classes as an assistant of the professor.
